

Welcome to the Food & Democracy Doctoral Research Cluster

It's clear that today's complex food and agriculture systems require integrated investigation from diverse scientific fields. However, as doctoral researchers in different disciplines, it isn't always easy to find opportunities to connect, collaborate and get inspired. This is the goal of the new Food & Democracy Doctoral Research Cluster, with support the HU Life Sciences Faculty. Through regular monthly colloquia, guest speakers, field trips, industry networking nights, research prizes and other events, the cluster offers an informal setting for scientific exchange and to highlight the doctoral research being done from all angles- public policy, economics, production, biology, psychology, gender, health and many more - in order to pave the way for future research collaborations in the food and agriculture sciences. Join us.

Meeting this week:

Academic "Speed Presenting"

Thursday, 19.04.2018, 5.30 pm, Room 2113, Haus 9

For our second meet-up we invite everyone to get to know (briefly) what fellow doctoral students are working on through short, informal partner presentations. In this format, you will present your research topic to one or two partners for 2-3 minutes, then they will present to you. After one minute of feedback (what did you take away from my presentation? Any crossover between our work?), we will then switch partners and present again, and so on.

No preparation is required. But if you want to bring a visual aid or a powerpoint to show on your laptop, feel free.
